

How to Use these Guidesheets

These guidesheets are specifically made for practicing Copperplate/Engrossers Script lowercase letters. The slant line is at 55 degrees and the x-height is labeled on the bottom. I've provided both 4/16 inch and 3/16 inch. Tip: Practice on a bigger x-height first. This will enable you to see your mistakes. When you are ready, move onto the smaller x-height.

The general ratio from the x-height to 2nd ascender/descender line is 1:3. Remember to think 'ovals' when writing, keep your downstrokes parallel to the slant line, and write slowly! Enjoy!
